PROFESSIONAL EXPERIENCE

Software Engineer II **2023 – Present**
Raytheon Intelligence & Space – Aurora, CO
- Led migration of an internal UI component from Angular to React, increasing code reuse across multiple applications and reducing maintenance time.
- Developed and integrated RESTful APIs and added WebSocket support for real-time data flow.
- Improved code coverage and reliability in Java Spring services integrated with PostgreSQL.
- Deployed scalable systems via Kubernetes with Helm and Docker; configured ingress for optimized routing.
- Maintained CI/CD pipelines and Jenkins jobs, ensuring test coverage and build stability.

Software Engineer I **2022 – 2023**
Raytheon Intelligence & Space – Aurora, CO
- Integrated a COTS mapping API into a satellite management thin-client web app using Angular and React.
- Delivered reusable, modular components with enhanced feature flexibility based on program needs.
- Managed Kubernetes deployments with Helm to streamline infrastructure.
- Collaborated within an Agile environment using Jira, Confluence, and Bitbucket.
- Conducted frontend trade studies (React, Angular, Vue.js) for architectural decision-making.

SELECTED PROJECTS

Software Systems Integration Lead – Senior Capstone Project **2021 – 2022**
University of Colorado Boulder
- Led software integration of an autonomous UAV software controller to maximize endurance through reduction in drag and optimizing power control.
- Designed and tuned a Linear Quadratic Tracker in MATLAB, ported to C++ for hardware integration.
- Contributed to successful flight simulation validation and software testing where an increase in endurance was observed.

Undergraduate Research Assistant **2021 – 2022**
BioServe Space Technologies – Boulder, CO
- Developed a Lunar Rover VR simulation in Unity (C#) to test stochastic resonance as a spaceflight countermeasure.
- Implemented procedurally generated terrain maps to simulate environmental noise variables.
- Co-authored peer-reviewed publication: https://www.frontiersin.org/articles/10.3389/fnins.2023.1180314/full

EDUCATION

B.S. in Aerospace Engineering Sciences **Spring 2022**
University of Colorado Boulder
- GPA: 3.43 / 4.00
- Minors: Computer Science & Space

TECHNICAL SKILLS

Languages: C, C++, C#, JavaScript, TypeScript, Python, Java, Bash, HTML, CSS, YAML
Frameworks/Tools: React, Angular, Vue.js, Node.js, Unity, Docker, Kubernetes, Helm, Gradle
Dev Tools: Git, Jira, Bitbucket, Confluence, STK, MATLAB, Microsoft Office Suite
Practices: Agile, CI/CD, DevOps, Microservices, Unit & Integration Testing
